

PGIM INDIA OVERNIGHT FUND

An open ended debt scheme investing in overnight securities.
A relatively low interest rate risk and relatively low credit risk scheme.

Rated A1+ mfs by ICRA##

March 2023

Investment Objective

PGIM India Overnight Fund aims to provide reasonable returns commensurate with low risk and providing a high level of liquidity, through investments made primarily in overnight securities having maturity of 1 business day.

Fund Suitability

- Suitable for investors looking for an avenue to park very short-term surplus funds for as low as one day
- For investors with a low risk appetite and seeking daily liquidity

Why Overnight Fund?

- Liquidity and Credit Risk is minimized as the maturity of the underlying investments of the fund is 1 Day and the exposure of the fund is limited to G Secs, T bills, TREPS, CROMS or AAA PSUs and PFI Money Market Instruments.
- Interest rate risk is eliminated as the fund only invests in securities with a tenor of 1 business day
- Positioned to deliver reasonable risk adjusted performance compared to traditional saving instruments
- No lock-in
- No entry or exit load.
- Same Day Returns: Purchases take place on previous days NAV, enabling one to earn returns on the day of investment*
(*Subject to compliance of applicable cut off time)

Investing Money in an Overnight Fund

- Investor invests in Overnight scheme
- For instance, if the scheme deploys money in TREPS/CROMS** on a T basis, the deployed amount earns overnight interest
- On T+1 day Maturity, in case of investment in TREPS/CROMS, CCIL** pays out the principal amount + overnight interest to the scheme
- Money is available to the investor

(** For investments in instruments such as Government Securities, T Bills, PSU and PFI Money Market Instruments the Fund manager may use other portals such as NDS OM, F Trac and NSECL)

Why PGIM India Overnight Fund?

- Low cost Overnight fund offering#
(#For latest TER, please refer website.)
- Daily Portfolio disclosure

All inflows into the fund follow the above flow chart of investment into a pre-defined set of risk-free or very low risk options. The fund is pre-dominantly invested in zero risk options (CROMS, TREPS) since lending under these windows is fully collateralized through the security of underlying Government Securities.

In general, variation in yields under these liquidity options (such as CROMS and TREPS) may not be very wide on a given day. However, there exists opportunities to generate higher yields through careful and appropriately timed deployment of funds which is guided by monitoring of liquidity trends within the system. The fund management team actively tracks parameters such as rolling 7 day and 15 days MIBOR and Call money rates, System liquidity, near term maturities of Government Bonds, on-going Bond (G secs, SDL) auctions, Government net balances, GST outflows, Government spending etc., which can be useful lead indicators of liquidity trends that in turn is used as a key input for liquidity management and yield forecasting for the Overnight fund.

What is TREPS

Triparty Repo i.e. TREPS, facilitates borrowing and lending of funds against the collateral of Government Securities in a Triparty Repo arrangement

- A repo contract is one where a third entity (apart from the borrower and lender), called a Tri-Party Agent, acts as an intermediary between the two parties to the repo to facilitate services like collateral selection, payment and settlement, custody and management during the life of the transaction
- Clearing Corporation of India Ltd (CCIL) would be the Central Counterparty to all trades from Tri Party Repo Dealing System (TREPS) and would perform the role and responsibilities of Triparty Repo Agent, in terms of Repurchase Transactions (Repo)
- Types of Entities that are eligible to participate in TREPS include Banks, Financial institutions, Insurance Companies, Mutual Funds, Primary Dealers, NBFCs, Pension Funds, Corporates etc.

What is CROMS

Clearcorp Repo Order Matching System (CROMS) an STP enabled anonymous Order Matching Platform launched by Clearcorp Dealing Systems (India) Ltd on 27th January 2009. This system enables dealing in two kinds of Repos –

1. Basket

- Basket Repos enables dealing in baskets wherein repoable securities have been classified based on instrument type, liquidity and outstanding tenor and clustered together.
- Details of security allocated are known to both counterparties post trade.

2. Special Repos

- It is a conventional repo, where both borrower and lender are aware of the underlying security against which deal is sought to be concluded.

About 70% of all market repo action against Government Securities is concluded on the Platform consistently as CROMS provides better

transparency, repo rate discovery and operational efficiency and has thus become the preferred avenue for market repo dealing.

Does the AUM of the Overnight Scheme matter?

The size of the scheme does not have any bearing on the scheme performance, since TREPS and CROMS are extremely large sized windows of liquidity deployment within the money-market system. Daily flows into TREPS for instance is in the range of INR 50,000 -70,000 crores. The price (yield) discovery within this window as a result of the diversified counterparty base is also very efficient.

Further, the size of the fund or the overall AUM of the fund-house has absolutely no bearing either on the performance of the fund or the relative safety of investor's money in the PGIM India Overnight Fund.

The fund can only be invested in securities with a residual maturity of 1 business day and hence, there is usually never an issue with creating liquidity to meet outflows if any. Being a highly liquid portfolio, exit of investors from the fund also has no impact either on liquidity creation or performance.

Fund Manager's View

- March 2023 may prove to be a turning point in the rate hike cycle being pursued by Central banks across the globe, as the US and European markets were roiled with a banking crisis, and the regulators had to step in to contain the fallout. Given the aggressive and the frontloaded rate hikes across the world, a bit of stress was expected at some point, and it came in the form of a mini banking crisis. Before the crisis unfolded, yields had risen on better than expected economic data and hawkish comments from the Fed / ECB officials as markets started to price in 50bps rate hike by the Fed. It all changed as the trouble started in US regional banks with the Silicon Valley Bank failing and Credit Suisse being taken over by UBS in a move engineered by the regulator. The US yield curve steepened with the US 2yr bond yield falling by almost 90 bps from its peak even as both the Fed and the ECB hiked rates but sounded dovish by acknowledging that the banking crisis will lead to tightening of financial conditions. The Indian Bond curve also steepened with the 2-5yr segment of the curve outperforming as yields in this segment fell by 20-25 bps whereas the yield on the benchmark 10yr bond fell by 12bps.
- Taking cognizance of the banking crisis in US and Europe and the need to assess the Impact of the cumulative 250 bps policy rate hikes done since May of last year, the MPC paused in its April 6th Policy meeting while stating that it's not a pivot. The MPC also forecast a favorable inflation /growth dynamic by lowering its average inflation forecast for FY24 to 5.30% and increasing its GDP growth forecast to 6.50%.
- Liquidity management will become the focus over the next two quarters as the banking system's liquidity has reduced by almost INR 7 lakh cr over the

course of the last one year and we expect that the current surplus liquidity will gradually reduce, bringing the focus back on liquidity management as there can be more instances of the MSF rate getting operational as and when liquidity in the banking system gets reduced. This will have implications for corporate bond spreads going forward as they are running quite tight from a historical spread perspective. We believe that the RBI is in for a long pause and we expect status quo on monetary policy to be retained over the next two quarters with a change in monetary stance to "Neutral" coming in at the August MPC Policy.

- The INR appreciated against the US dollar by 0.59% during the month as the Indian trade deficit and BOP came in better than expected and the US dollar also weakened. Brent fell during the month before a surprise production cut by OPEC+ led to a rise in prices in the first week of April.
- FPI flows into Indian Fixed Income markets were muted in March with marginal outflow of USD103 Mn taking the net inflow into debt at USD 357Mn on a CYTD basis.
- The incremental Credit / Deposit ratio of the banking system continues to be elevated with credit growth @15.00% and deposit growth@9.60% on a YoY basis putting pressure on short-term deposit rates and money market yields. This gap between the deposit and the credit growth rates means that the money market rates will continue to sustain at the current elevated levels with the flatness in the curve persisting.
- We expect the 10yr Benchmark bond to trade in a range of 7.10% to 7.40% till April end.

About Us

PGIM India Mutual Fund is a wholly owned business of PGIM, the global investment management business of the US based Prudential Financial, Inc. (PFI). PGIM India Asset Management is the full service investment manager of PGIM India Mutual Fund, offering a broad range of equity and fixed income solutions to retail and institutional investors throughout the country. ICRA has assigned the "[ICRA]A1+mfs" (pronounced as ICRA A one plus m f s) rating to the PGIM India Overnight Fund. Schemes with "[ICRA]A1mfs" rating are considered to have very strong degree of safety regarding timely receipt of payments from the investments that they have made. Modifier ("+" (plus)) can be used with the rating symbol to reflect the comparative standing within the category. The ratings should, however, not be construed as an indication of the performance of the Mutual Fund scheme or of volatility in its returns. For complete rating scale and definitions please refer to ICRA's Website www.icra.in or other ICRA Rating Publications ICRA Credit Quality Rating Methodology for debt mutual fund schemes. ICRA's mutual fund rating methodology is based on evaluating the inherent credit quality of the fund's portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores". These scores are based on ICRA's estimates of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality.

Macaulay Duration: The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price. **Modified Duration:** Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
